ABOUT ME:

I take extreme ownership of the problem I am working on. My dedication to quality and meticulous attention to detail enables me to produce work of exceptional standard.

Recommendations:

- **Andrii Zaichenko**, Product Manager at Panther Protocol, wrote a comprehensive two-page recommendation regarding my work at the company ([ref](#)).
- “[Ahmed] has a great work ethic and will go the extra mile to see the work done even in challenging circumstances.” — **Reuben Yap**, Founder of Firo.
- “Your versatility in both front-end and back-end development has been a game-changer for EMURGO Fintech.” — **Vineeth Bhuvanagiri**, Managing Director at EMURGO Fintech ([ref](#))
- “[Ahmed] was reliable, autonomous, and handled complex technical tasks with a high level of quality” — **Haïdar Deenmahomed**, Blockchain Lead at The Risk Protocol.

PROFESSIONAL EXPERIENCE:

Full Stack Engineer | Panther Protocol

England, United Kingdom (Remote) | Nov 2022 - Present

Joined during a critical development phase to integrate zero-knowledge smart contracts and Circom-based ZK circuits into the dApp, rapidly becoming a key contributor to the core product infrastructure within weeks of onboarding.

Key Achievements & Responsibilities:

- Integrated complex zero-knowledge smart contracts and ZK circuits (written in Circom DSL) into the production dApp, ensuring seamless interaction between frontend, backend, and privacy-preserving cryptographic protocols.
- Collaborated intensively with the tech lead to deliver the Miner Client—a critical protocol component—within just 3 days to meet an aggressive deadline.
- Handled the entire trusted setup ceremony.

Tech Lead | LiteSpace

Cairo, Egypt (Remote) | May 2024 - Oct 2025

Led a team of 5 engineers building a full-stack SaaS platform within a TypeScript monorepo, keeping client, server, and all internal packages in sync through a unified type system.

Key Achievements & Responsibilities:

- Established and maintained engineering standards across the team: Conventional Commits, a documented coding style guide, deployment guidelines, and robust CI/CD pipelines.
- Led the design of a PostgreSQL data layer built on Knex, with full integration test coverage against a real database, enabling confident schema and query changes at any time.

- Built a platform-agnostic headless hooks library that encapsulated client-side logic and could be consumed across React, Next.js, and React Native without modification.

Full Stack Engineer | EMURGO

North Carolina, United States | Apr 2021 - May 2024

Delivered full-stack development across EMURGO Fintech's platform, collaborating closely with design, product, tech, and QA teams to extend platform capabilities and maintain critical infrastructure for the Cardano ecosystem.

Key Achievements & Responsibilities:

- Developed and maintained the **dApp Connector**, enabling Cardano developers to build decentralized applications that interact with the Cardano blockchain through the Yoroi wallet Chrome extension.
- Maintained and enhanced **open-source packages** utilized by the Cardano community and internal development teams, ensuring reliability and compatibility across the ecosystem.
- Awarded [Duo-Coder Virtuoso](#) in recognition of exceptional versatility in full-stack development and a proven track record of technical excellence in extending platform capabilities.

Open Source Developer (Co-Maintainer) | Synthetix - Synpress

Sydney, NSW (Remote) | Feb 2023 - Jul 2023

Spearheaded the technical modernization, development, and community maintenance of the Synpress E2E testing framework. Drove significant improvements in performance, code quality, and documentation, ensuring the framework remained a high-quality tool for its growing user base.

Key Achievements & Responsibilities:

- Migrated the entire codebase from JavaScript to TypeScript, improving type safety and developer experience across the framework.
- Optimized package distribution by reducing bundle size and implementing headless browser support for CI/CD environments.
- Maintained the project through feature development, issue triage, pull request reviews, code refactoring, and test coverage improvements.

SKILLS:

- JavaScript, Typescript, NodeJS, Rust, Python.
- React, NextJS (and its ecosystem).
- RestfulAPI, GraphQL.
- SQL (PostgreSQL, MySQL).
- NoSQL (MongoDB).
- Caching (Redis).
- Cloud (Digital Ocean, AWS).
- Testing (Cypress, Jest).
- Linux, Git, Bash, Vim.
- Networking (Nginx).
- CI/CD.
- Docker.
